CouchPRO Mini Maxx is a balanced maintenance fertiliser containing 84% nitrogen in the stabilised Umaxx form to reduce losses through leaching and volatilisation. The inclusion of calcium and magnesium in *CouchPRO Mini Maxx* will assist in cell development and plant strength while additional iron and manganese will enhance turfgrass colour.

Features

- Umaxx Stabilised Nitrogen provides protection against all three forms of nitrogen loss.
- Balanced N:K levels for plant growth and conditioning.
- Highly soluble fertiliser granules enables excellent incorporation into the root zone following rainfall or irrigation.
- 150SGN for improved application uniformity.

Dependable performance

Rapid green-up

Sustained colour

Reduced nitrogen losses

MINI SERIES FERTILISERS

Ideal for use on closely mown turf surfaces

How Umaxx Works

Umaxx Stabilised Nitrogen technology is a dual inhibitor, urea-based product containing both urease and nitrification inhibitors to minimise nitrogen losses. Umaxx provides protection against all three forms of nitrogen loss - leaching, denitrification and volatilisation. This allows time for nitrogen to move into the root zone and stay there longer. As a result, there is an immediate green-up, followed by a sustained turfgrass response for up to 12 weeks.
