

VerdiMate

Liquid Humic Extract

VerdiMate Liquid Humic Extract is a high quality liquid fulvic acid sourced from some of the finest humic sources available. It begins with sub-bituminous coal which is a higher quality humic source which is more oxidized and more rich in fulvic and humic acids. The fulvic is extracted without use of invasive solvents and all impurities are screened out. VerdiMate is backed by scientific research demonstrating effectiveness.

Benefits:

- Increases uptake and translocation of nutrients
- Stimulates plant metabolism
- Acts as a catalyst in respiration
- Enhances permeability of cell membranes
- Enhances cell division and cell elongation
- Increases drought tolerance and prevents wilting
- Increases enzyme activity
- Aids chlorophyll synthesis

VerdiMate fulvic acid is a clear amber color with extremely high solubility

Verdimate is ideal for adding to any spray solution to enhance spray performance. It mixes well with just about anything you add to your spray tank. VerdiMate is extremely well suited for getting the most out of your foliar fertilizer applications by enhancing nutrient uptake through the leaf and transporting those nutrients through the plant. The fulvic acid in VerdiMate also provides valuable soil benefits such as nutrient retention and microbial activity stimulation.

The recommended application rate is 50 ml / 100 m² and can be applied every time you spray.
