

# Online Software Support Package

Effectively manage the operations and resources at your turf facility

## Ground2Control People

People are generally the biggest resource an organisation has to manage.

Communication across management groups is important and our powerful tools enable employee details, costs, tasks, training and hours to be effortlessly recorded, tracked, shared and analysed in real time.

Our tools save hours and hours of time, identify which tasks require the most time and enable people to be directed exactly where they are needed.

## Ground2Control Agronomics

The Agrio module allows planning, recording and monitoring of all treatments across specific areas of your facility with the ability to create spray records and link back to inventory to

manage stock. Product usage, costs, and nutritional and chemical inputs can be compared year on year.

## Ground2Control Machinery

The Kit Module provides all the tools to help you manage your equipment simply and effectively.

Preventative maintenance schedules and powerful analysis reports, such as real time

running costs factoring in time used, depreciation, labour and parts, show how cost effective your equipment is.

The Ground2Control integrated online applications help our customers to manage operations, resources and safety more effectively to achieve their goals.

## Ground2Control Money

The Money Module is a comprehensive financial management system which enables your team to record, monitor, share, analyse and control costs and budgets relating to all aspects of your operation.

Purchase orders, goods received, invoices, credits, inventory and stock are all seamlessly linked together providing real time cost management for your entire team.

Costs are automatically compared with budgets in real time. Monthly, quarterly and annual financial reports are available at the click of a button, saving hours of time.

## Additional Option

### Ground2Control GIS

GIS is an optional extra online browser which enables you to view your entire facility any time.

Layers of information can identify key areas, services, chemical treatments, safety features, circulation routes, planned changes or improvements and historical data.

Seamlessly link GIS to our Resource Management tools to provide accurate areas for chemical applications, seeding and turfing and maintenance costs.
